## CSE 201

JAVA PROGRAMMING I

## Primitive Data Type

## Primitive Data Type

## byte

8-bit signed
Two's complement
Integer
-128~127

## Primitive Data Type

## short

## 16-bit signed Two's complement

Integer
-32768~32767

## Primitive Data Type

32-bit signed Two's complement
Integer

$$
-\left(2^{\wedge} 31\right) \sim\left(2^{\wedge} 31\right)-1
$$

## Primitive Data Type

## long

64-bit signed
Two's complement
Integer

$$
-\left(2^{\wedge} 63\right) \sim\left(2^{\wedge} 63\right)-1
$$

## Primitive Data Type

# 32-bit IEEE 754 floating point 

i.e. 12.42581

## Primitive Data Type

## 64-bit <br> IEEE 754 floating point

i.e. 12.42581214314

## Primitive Data Type

## double

Never use float or double to represent precise values Such as currency
Solution: java.math.BigDecimal class

## Primitive Data Type

## Convention between data types

Small size data type à Big size data type OK i.e. int à long

Small size data type $\beta$ Big size data type

## Primitive Data Type

On June 4, 1996 Ariane 5 rocket launched by the European Space Agency exploded just 40 seconds after its lift-off from Kourou, French Guiana.

It costs $\$ 7$ billion Development $+\$ 500$ million cargo loss

Reason: Convention failed between floating number and 16 -bit integer

## Primitive Data Type

## boolean <br> true, false

## This data type represents 1 bit of information

## Primitive Data Type

## char

## 16-bit Unicode character

| Dec | Hx | Char |  | Dec | Hx | HTML | Char | Dec | Hx | нTML | Char | Dec | Hx | HTML | Char |

## Variable

## Variable in computer science is the name you give to computer memory

 locations which are used to store values in a computer program.$$
\begin{aligned}
& \text { int } \mathrm{i}=10 ; \\
& \text { double } \mathrm{d}=12.58 ; \\
& \text { boolean isEmpty = false; } \\
& \text { char } \mathrm{c}=\text { ' } \mathrm{q} \text { '; }
\end{aligned}
$$

## Variable

Copyright 2016 by Smart Coding School

## Variable

## Declaration:

## type variableName;

For example: int number; boolean isEmpty; String firstName;

## Variable

## Assignment:

variableName = value;

For example:
number = 10;
isEmpty = true;
firstName $=$ "Tom";

## Variable

## int number = 10; <br> boolean isEmpty $=$ <br> true; <br> String firstName $=$ "Tom";

## Variable

public static void main(String[] args) \{ int $\mathrm{i}=10$;
int $j$;
j $=7$;
int $\mathrm{k}=\mathrm{i}+\mathrm{j}$;
System.out.println(k);

## Variable

public static void main(String[] args) \{ int $\mathrm{i}=10$; int j;
j = 7;
int $\mathrm{k}=\mathrm{i}+\mathrm{j}$;
17
System.out.println(k);

## Variable

public static void main(String[] args) \{
int $\mathrm{i}=10$;
int j ;
$j=7$;
int $\mathrm{k}=\mathrm{i}+\mathrm{j}$;
System.out.println( $\mathrm{i}+"+"+\mathrm{j}+"="+\mathrm{k})$;

## Variable

public static void main(String[] args) \{ int $\mathrm{i}=10$; int j;
$\mathrm{j}=7$;

## $10+7=17$

int $\mathrm{k}=\mathrm{i}+\mathrm{j}$;
System.out.println(i+"+"+j+"="+k);

## Variable

public static void main(String[] args)
\{ String s = "horse";
System.out.println(s);
System.out.println(s + s);

## Variable

public static void main(String[] args) \{
String s = "horse"; System.out.println(s); System.out.println(s + s);

## horse <br> horsehorse

## Convention

Rule:

1. int with int=> int
2. int with double $=>$ double
3. Anything with String $=>$ String
4. Expression operation from left to right

## Convention

## Example: int with int => int

$$
\begin{aligned}
& 5 / 2=2 \\
& 10 * 3=30
\end{aligned}
$$

## Convention

## Example: <br> int with double => double

$$
\begin{aligned}
& 5 / 2.0=2.5 \\
& 5.0 / 2=2.5 \\
& 10 * 3.0=30.0
\end{aligned}
$$

## Convention

## Example:

## Anything with String => String

$$
\begin{aligned}
& 4+" 1 "=>" 41 " \\
& " 1 "+4=>" 41 " \\
& " 1 "+{ }^{\prime \prime}{ }^{\prime \prime}=>" 12 "
\end{aligned}
$$

## Convention

## Example: Left to right

$$
\begin{aligned}
& 1 / 1.0+4+\text { " } 1 \text { " }=>\text { " } 5.01 \text { " } \\
& 1 / 1.0+(4+\text { " } 1 \text { ") }=>~ " 1.041 \text { " }
\end{aligned}
$$
